

Thinking of Getting a Kunekune Hog?

Four Key points need to know

BEFORE you buy!

Zoë Thorbergson MAnimalSc. www.thorcrestfarm.ca

Management: Do you know how to care for a Kunekune?

Understanding basic management, biosecurity, parasite control, disease mitigation and behavioural indicators of a healthy or sick pig is essential for pig health and welfare. And will save you time and money!

Feeding: Do you know how and what to feed Kunekune?

Different classes of pigs (boars, sows, piglets etc.) need different levels of nutrition. Understanding a pig's digestive system will help avoid serious and potentially **costly** health and welfare issues.

Housing: Do you know the minimum requirements?

Pigs compete for space and may prevent other pigs from eating, drinking or entering barn/shelter. Are you able to provide enough shelters, wallows, fresh water and enough feed tubs to maintain healthy and happy pigs?

Veterinarian: Do you have access to a swine veterinarian?

Veterinarians play a key role in providing management advice to mitigate emergency health and welfare issues. Preventing health and welfare issues saves time and money!
